Final Project Progress Report

1) Which tasks have been completed?

I have spent some time finding suitable articles for the analyzer to train with and analyze.

2) Which tasks are pending?

I need to implement the political bias analyzer with LSA and then train it with the training set and test it with the testing set of articles.

3) Are you facing any challenges?

Not too much, yet. It's difficult to find articles that really feel like good examples, so I may need to find more and switch some out if they aren't working well with the political bias analyzer.
